Newflash - Telegrafik

Telegrafik announces its collaboration with Telemedicine Technologies SA, a collaborative software publisher in e-Health and leader in the field of Clinical Research.

After a successful first collaboration as part of the 3PEGASE project to monitor vulnerable elderly people living at home and prevent their loss of independence, **Telemedicine Technologies and Telegrafik are sealing their partnership.**

Telegrafik's intelligent sensor data analysis platform is now linked to Telemedicine Technologies' CleanWEB solution and integrates the TECH-Alliance.

Through this partnership, Telegrafik can make its cutting-edge data processing and algorithmic expertise available to Clinical Research via the CleanWEB platform.

"Our Otono-me service allows families to watch over their vulnerable loved ones from a distance. It made sense to offer these same technologies to laboratories which, as part of clinical research projects, wish to monitor patients remotely. Thanks to Telegrafik, it is possible for them to monitor the constants of their patients in the months preceding a surgical operation!" says Carole Zisa-Garat, CEO of Telegrafik.

Learn more about the Tech-alliance:

Increased connectivity, the Internet of Things, big data, artificial intelligence, etc. are revolutionising the e-Health and Clinical Research sector. In this highly competitive environment where innovation plays a central role, Telemedicine Technologies has created the TECH-Alliance ecosystem: a set of suppliers selected for the quality and innovative relevance of their products and services, in order to be able to offer customised, modular solutions capable of responding to any type of project.

About Telegrafik

Telegrafik offers connected services for the care of vulnerable people at home and remote monitoring of patients. Telegrafik has been honoured with many awards since its inception in 2013. Among these achievements, the company won the BPI France Digital Innovation Contest in 2017.

Thanks to fundraising activities totalling over one million euros in January 2017, it launched an innovative remote assistance solution, Otono-me, onto the market.
