**Telegrafik enters smart home market
by launching Otono-me One & Five
to the general public**

Until now, Telegrafik has evolved by providing its' Otono-me service in the heavily regulated telecare market, making everyday life safer for the elderly as they lose their independence. The company announces the launch of two new products during the Mobile World Congress 2019, bringing Otono-me to the General Public.

Telegrafik enters smart home market

During the Mobile World Congress, held in Barcelona from 25th to 28th February, Telegrafik announce the launch of Otono-me One and Otono-me Five, establishing their entry into the General Public smart home market.

Carole Zisa-Garat, founder of the young start-up, has a clear goal: *"To offer a more accessible service, allowing the maximum number of people to look after relatives experiencing a loss of independence."* Indeed, until now the Otono-me home telecare option was aimed exclusively at the telecare market. However, these two new packages Otono-me One and Otono-me Five are now readily available to the General Public through care workers.

"Increasingly, insurance companies want to offer high added value services for families, and the Otono-me One and Five allow this" adds **Carole Zisa-Garat**.

What exactly are Otono-me One and Otono-me Five ?

Otono-me One and Otono-me Five allow users to monitor relatives, through a dedicated application, and be alerted of a potential risk situation (ex: a fall or sickness). The service uses data transmitted from a sensor system installed in the house and artificial intelligence developed by Telegrafik.

About Telegrafik

Telegrafik offers connected services for home support and monitoring of vulnerable persons' and patients. We develop well-being solutions, based on analysis technology and advanced algorithms. The "Jeune Entreprise innovante", Young Innovative Business, certified start-up has received multiple awards from its creation in 2013. Notably, Telegrafik was named winner of Concours d'Innovation Numérique BPI France 2017, a prize celebrating digital innovation. Thanks to fundraising over a million euros in January 2017, we launched an innovative remote assistance product, Otono-me onto the market.
