## KINE-SIM: a solution for the rehabilitation of patients recovering from Covid-19

Telegrafik, the exclusive distributor of the KINE-SIM in France, offers a solution to Healthcare establishments (nursing homes, Follow-up Care and Rehabilitation Establishments, etc.) to support the rehabilitation of Covid-19 patients, following their admission to an intensive care unit.

At a time when physiotherapists are and will be particularly sought after to look after the rehabilitation of these patients, the KINE-SIM proves to be a real relay to the work of the medical teams.

### The KINE-SIM: a relay for physiotherapists in the rehabilitation of Covid-19 patients

*"When physiotherapy departments are overloaded in the coming weeks, our KINE-SIM solution can take over their work in the coming weeks."* , explains Carole Zisa-Garat, founder of Telegrafik. *"This device, which uses simulation and virtual reality technology to help people age well, is a real asset in the current economic crisis."* , she adds.

The device, which is installed in health care facilities within Aftercare and Rehabilitation Departments (SSR) and retirement homes, provides motivating sports activities and thus supports the work of caregivers.

An all-in-one exercise device for rehabilitation and maintenance of functional independence, the KINE-SIM supports the work of physiotherapy departments and improves the quality of life and physical condition of vulnerable people, while differentiating itself in particular through a playful and therefore motivating approach.

It is also the only device combining two motorised force plates that can move the user in synchronisation with a multitude of multimedia scenarios, working on balance, motorskills, orthopaedics and cognitive abilities all at the same time.

#### About Telegrafik

Telegrafik offers connected solutions for ageing well, based on artificial intelligence and internet of things technologies. Our goal? To enable vulnerable or elderly people to stay independent for as long as possible in their own home, a retirement home or a nursing home, with the help of family or professional caregivers. This start-up with "Young Innovative Company" status has been honoured with many awards since its creation in 2013. Among these achievements, the company won the BPI France Digital Innovation Contest in 2017.
