Otono-me Nursing homes EDAO

Supports caregivers

Promotes residents care

- + A solution that has been proven**
Otono-me nursing homes EDAO takes care of residents and alerts automatically caregivers when needed.
- + For frail residents**
 - > Automatic detection of falls or patients' abnormal activity
 - > Maintains autonomy
 - > Decreases serious falls' incidence
- + For nurses and caregivers**
 - > Caregivers are relieved and more available to take care of the residents
 - > Night walks are more targeted
 - > Caregivers alerted through the nurse call device when a risky situation is automatically detected
 - > Professional interface - Rooms global view

« Half of night falls are not detected in nursing homes. The video vigilance system reduces the rate of serious falls by 47%. »
Pr Dantoine, Chaire's responsible « autonomy's decrease prevention », Limoges University

HOW DOES IT WORK ?

A daily prevention

If a risky situation is detected, the assistance platform checks it. All the alerts are verified before being sent to the nurses.

Caregivers are systematically alerted if an intervention is needed.

Room Monitoring Home Page

All the alerts and information sent are available to the health manager and doctors

- > Better falls take over*
- > Set up standard procedures to avoid falls*
- > Quick identification of risk factors for falls for each patient*

TELEGRAFIK
